Dallas Water Utilities

Owner – City of Dallas

Location – Dallas, Texas

Contract Value - \$96,000,000

Completion Date – On-going since 2005

- Work includes replacement and rehabilitation of existing water and wastewater facilities in various locations within the City of Dallas
- Existing water mains ranging from 2" diameter thru 96" diameter are replaced in streets, alley and easements using conventional cut & cover and directional bore methods
- Existing sanitary sewer mains ranging in size from 4" diameter thru 72" diameter are replaced and rehabilitated in streets, alley and easements using cut & cover methods, pipe bursting and slip lining methods
- All projects in streets and alleys require concrete or asphalt pavement replacement
- Large valve replacement includes removal and replacement of existing 24" thru 72" water valves. While replacing individual valves, all work was continuous (24 hrs)/day) until the valve and water main were brought back on line.
